

Terms of supply ¹⁷⁷Lutetium chloride

Dear customer,

The use of carrier-added (c. a.) ¹⁷⁷Lu is excellent for therapeutic radiopharmaceuticals. The production route takes advantage of highly enriched Lu-176.

Through our reliable, long-term partnerships with nuclear reactors we can guarantee security of supply and weekly availability.

By combining our 12 year experience as a nuclear pharmacy, worldwide distribution capabilities and our large and flexible production capacity, we can assure worldwide delivery of these therapeutic radionuclides on time, and in the quantities you require soon after production.

¹⁷⁷Lu chloride is a radiopharmaceutical precursor, and it is not intended for direct use in patients. It is to be used only for the radiolabelling of carrier molecules that have been specifically developed and authorized for radiolabelling with Lutetium (¹⁷⁷Lu) chloride.

Licenses and permits

Supply can be established only with a valid import and handling of radio- active materials licenses. Kindly make sure you send a copy prior to first shipment to our customer service mail.

Ordering deadlines

Orders should be placed every Tuesday until 12:00 CET for supply 13 days after.

Cancellation\ update of orders

Order cancelation and update can be done 10 days before delivery.

After that, the products will be billed at 100%:

Delivery

Generally, the activity is to be delivered shortly prior to the date of calibration.
